

Red Mulberry

Genus/species	<i>Morus rubra</i>
Family	Moraceae
Distribution	Eastern US Central Texas eastward to S Florida S Florida northward to New Jersey New Jersey westward to SE Minnesota SE Minnesota southwestward to central Texas Scattered localities in Pennsylvania, New York and New England

Comments This is the only native mulberry throughout its range except for the extreme southwestern part. It is a relatively small or medium-sized tree, sporadically distributed in lowland areas and flood plains. Leaves vary in size but may exceed four inches in length, and may be entire or have one or two lobes; the undersides are lighter than the upper surfaces. Male and female flowers are produced on separate trees in the spring, pollination is achieved by wind, and the fleshy fruits ripen during the summer when they are eagerly sought by wildlife.
